1704. Determine if String Halves Are Alike

EasyTopicsCompaniesHint

You are given a string `s` of even length. Split this string into two halves of equal lengths, and let `a` be the first half and `b` be the second half.

Two strings are **alike** if they have the same number of vowels (`'a'`, `'e'`, `'i'`, `'o'`, `'u'`, `'A'`, `'E'`, `'I'`, `'O'`, `'U'`). Notice that `s` contains uppercase and lowercase letters.

Return `true` if `a` and `b` are **alike**. Otherwise, return `false`.

Example 1:

Input: `s = "book"`
Output: `true`
Explanation: `a = "bo"` and `b = "ok"`. `a` has 1 vowel and `b` has 1 vowel. Therefore, they are alike.

Example 2:

Input: `s = "textbook"`
Output: `false`
Explanation: `a = "text"` and `b = "book"`. `a` has 1 vowel whereas `b` has 2. Therefore, they are not alike.
Notice that the vowel `o` is counted twice.

Constraints:

- `2 <= s.length <= 1000`
- `s.length` is even

Code

JavaAuto

```
1 class Solution {
2     public boolean halvesAreAlike(String s) {
3         int countA = 0;
4         int countB = 0;
5
6         int n = s.length();
7
8         for (int i = 0; i < n / 2; i++) {
9             if (isVowel(s.charAt(i))) {
10                 countA++;
11             }
12         }
13     }
14 }
```

1314. Matrix Block Sum

MediumTopicsCompaniesHint

Given a `m x n` matrix `mat` and an integer `k`, return a matrix `answer` where each `answer[i][j]` is the sum of all elements `mat[r][c]` for:

- `i - k <= r <= i + k`,
- `j - k <= c <= j + k`, and
- `(r, c)` is a valid position in the matrix.

Example 1:

Input: `mat = [[1,2,3],[4,5,6],[7,8,9]]`, `k = 1`

Output: `[[12,21,16],[27,45,33],[24,39,28]]`

Example 2:

Input: `mat = [[1,2,3],[4,5,6],[7,8,9]]`, `k = 2`

Output: `[[45,45,45],[45,45,45],[45,45,45]]`

Constraints:

- `m == mat.length`
- `n == mat[i].length`
- `1 <= m, n, k <= 100`
- `1 <= mat[i][j] <= 100`
